

Description

Name: i-port Advance®

Detail: i-port Advance® is the first injection port to include an inserter. This simple feature provides the user with a virtually painless insertion when applying the soft cannula (a small, flexible tube) under the skin. The result is a comfortable, dependable application experience.* Once applied, only the soft cannula remains under the skin, allowing for direct medication delivery from the injection into the subcutaneous tissue.

Dimensions and Characteristics

Height 0.366 inch (9.3 mm) above skin, applied

Diameter - body 1.128 inches (28.7 mm)

Diameter - adhesive pad 1.555 inches (39.5 mm)

Length - soft cannula Available in 6 mm and 9 mm lengths

Caliber - insertion needle 27 gauge

Residual space - delivery channel < 0.0026 mL (0.26 IU)

U.S. Availability By prescription only

Indications for use i-port Advance® is indicated for both adults and children requiring daily subcutaneous injections.

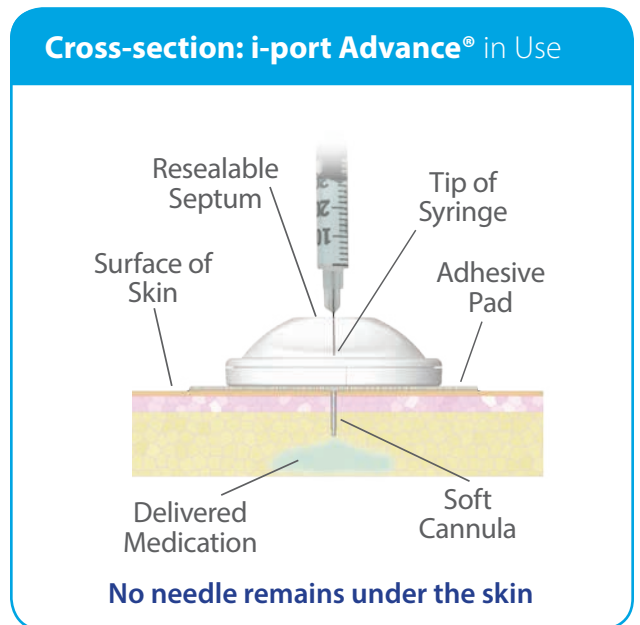

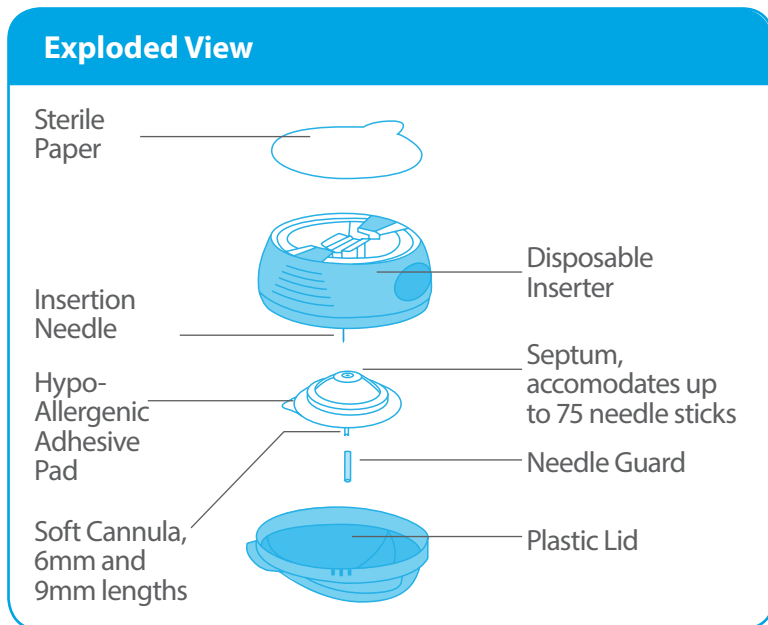

Needle Compatibility Injection needle should not exceed 5/16" (8mm) in length

Septum durability Up to 75 needle sticks

Wear time Up to 72 hours (or 75 needles sticks, whatever comes first)

Packaging Each i-port Advance® comes packaged individually in a box of 10 devices or roughly a 1month supply

Cannula Length	Model Number	NDC
6 mm	MMT-100	76300-0100-10
9 mm	MMT-101	76300-0101-10

*Survey data on file; individual results may vary.

Important Safety Information: The i-port Advance injection port is prescription-indicated for patients who administer, or to whom is administered, multiple daily subcutaneous injections of physician prescribed medications, including insulin. The device may remain in place for up to 72 hours to accommodate multiple drug injections without the discomfort of additional needle sticks. Site infection and/or irritation are possible. Patients experiencing such symptoms should immediately consult their healthcare provider and/or discontinue use.
